

I am very concerned about the BPL proposal. Just about every amateur radio operator has been plagued with power line interference at one time or another. Over the years I have experienced the frustration of trying to get the electrical utility company to correct interference problems with little success. BPL has the potential to cause substantial interference to licensed amateur operators operating in the hf spectrum. Considering that many of those operators provide free emergency radio services as volunteers in times of emergencies, this is a serious problem that should not be ignored. I hope that the FCC thoroughly investigates the interference potential of BPL before making a decision whether or not to implement it.

Thank you,
